

Fold Here

Children all around the world can log into www.santa.com and fill out a form to request a present.

The information is stored in a file, globalgoodies.txt

Here is the code for the program handling the file.

Translate this program into PSEUDOCODE.

```
def addToFile(username):  
  
    #f is type FILE  
    #present, fileString are type STRING  
  
    f = open("globalgoodies.txt", "a")  
  
    present = input("Please type your present, 20 characters max")  
  
    while len(present)>20:  
        print("Sorry! Try to reduce the name of your present!")  
        present = input()  
  
    fileString = username + ": " + present  
  
    f.write(fileString)  
  
    f.close()  
  
    return True
```
